About Me

Fullstack web developer and python-ister from Nigeria. I have projects in Python frontend and fullstack development like Youtube Downloader Portfolio websit and Department Management System.

Education

Federal Polytechnic Ile-Oluji, Ondo State

2021 - Present

Other Qualification-Computer Engineer

Skills

Python

React.js

Next.js

Django

Javascript

Experience

Wireless Marvels, Inc-Software Engineer

2022 - Present

The Employer presented me with a Game create for him in Python Kivy which was not be completed and had some bugs. As a kivy and KivyMD developer I was tasked with not just fixing the app but also packaging the app for Google PlayStore which I succesfully did.

Projects

React Portfolio website

After much practise on React.js I saw that it was time to work on a personal project and I saw non better than a portfolio website developed completely in React.js

Kivy and Django Todo list app

As a python developer with full understanding of kivy and django I decided to develop a project make completely in python with Django for backend and Kivy/KivyMD for frontend. The project takes a fully modern UI and well secured backend as its most prominent features.

Departmental Management System

I chose to use my expertise with Django and Next.js to create a Departmental Management System for the Department of Computer Engineering as part of my senior project. Online assignments and study materials can both be uploaded and downloaded.

Achievements

Ive been successful. And as I continue on this lifes journey, I think Ill win even more. I went from being the Senior Prefect of my secondary school to being one of the most effective Association of Computer Engineering Presidents in my Polytechnic Institution.
